

making fhttp request - Vienna wong.

get : Fetching data from web server

put : update a specified resource

post : Pass data to server and add data

delete : make a request to delete data in the server.

Python responds to requests made from the mobile app.

RESTful API w/ JSON where:

- * Mobile app makes an http request to the server, with either URL parameters or JSON body.
- * Python app responds to request w/ an HTTP status code and optionally JSON Body.

what is a RESTFUL api.

- api - basically a waiter / messenger b/w running software.
- based on http protocol
- architectural style and an approach to communication b/w frontend and backend.

We can use python to provide restful APIs at the backend, then swift to call these apps at the front end

- 1 Use python to develop the APIs
 - 2 Making HTTP Requests swift w/ URL Request
- } still need to look into: How to construct a URL

Have: Tutorial for creating URL Requests on Xcode.

Flask - Python.

decided on: FLASK (webframework) pretty similar to Node JS w/ Get/post Request, just flask uses python
we can host on a local server (local IP Address) or 0.0.0.0 → through same wifi. OR

Parse platform? } Road block - Not sure what to host on. wanna find a free
Python everywhere } server hosting service.
